We Can Prevent Companion Animal Euthanasia by Spaying and Neutering to Hinder Birthing

We the undersigned, believe Spaying and Neutering of Pets, is an important factor with maintaining Animal Population & Health. We understand that if one Pet births 12 offspring within one year, that they have outnumbered the people in our household! We acknowledge that those 12 new borns will require a new home or have to be surrendered to a shelter or other. We acknowledge that animal facilities are full with homeless animals that people can no longer keep. By Spaying and Neutering pets, we help prevent unwanted births and eventually save lives that would be born, only to die before their time. Economical Spay Neuter Clinics for this non-medical emergency procedure are a must to regulate unwanted births.
